- An additional 3% discount if the payment is paid in full at the time of ordering product and can be used in conjunction with any of the programs except for the financing programs with Diversified Financial.

Precision Planting Products Explained

vDrive- is an electric drive that is paired with an industry leading vSet meter to act as rate and section control for each individual row. It eliminates your clutches, hydraulic drives, chains, and cables and delivers extremely accurate population control even around curves. Simple and efficient!!!

DeltaForce- replaces the springs or air bags on your planter with hydraulic cylinders. It automatically increases or reduces weight with military precision, on each row individually. So when one row encounters conditions different than another (wheel tracks, old road beds, clay knobs, headlands, whatever), each will adjust independently. Row by row, foot by foot, depth stays exactly where you want it.

SpeedTube- enables accurate seed spacing at any speed — regular seed tubes just can't handle going faster. Take control of your best planting window at double your speed. The secret is in the flighted belt that takes gravity out of the equation. There's no opportunity for seeds to ricochet into the trench. Even at twice the speed you normally plant, every seed arrives safely at the bottom of the trench, spaced evenly, every time. So the perfect plant spacing is attainable, while Maximizing that perfect planting window.

vDrive Insecticide- is the electric motor-driven insecticide meter that provides accurate delivery across your entire speed range. Row by row population, and section control for your insecticide delivery is now within reach.

OPI Grain Management Systems 2019 10% Off **Summer Program**

From now until July 26th, 2019, OPI advanced grain management systems is offering **10% off** all hardware on new orders.

For over 30 years, OPI has provided leading-edge grain management solutions to the worldwide marketplace to help effectively manage grain in storage and prevent losses. OPI's commitment to advancing grain storage management has yielded numerous innovations to help farmers and agribusinesses protect and optimize the value of their stored grain assets. As a result, OPI has become the recognized world-leading supplier of grain storage management solutions—helping to secure the planet's essential grain supply in an environmentally-friendly way through reduced energy consumption and spoilage losses. **OPI is generally 20%-30% less expensive than the competitor's products, and can do much more.**

OPI Blue: OPI Blue is a wireless system that delivers hourly grain storage information to your mobile or desktop devices and allows you to remote access your grain info and provide your bins with automatic fan control. No more driving to your bins to plug in. Now you can access your critical grain storage information wherever you work, live, or play. Increase profits by maximizing quality, reducing loss, and minimizing shrink. Manage your grain with confidence while reducing energy costs.

OPI Blue features:

- Remote control of your fans, up to 80% reduction in run-time
- Hourly grain temperature and moisture readings
- Grain inventory levels
- Weather station integration for ambient temperature and relative humidity conditions
- Equilibrium Moisture Content calculations
- PC, Apple (iOS) and Google (Android) compatible
- Ability to view all bins at once
- New features automatically download from the internet
- Historic data stored securely and backed up online
- Enabled for remote troubleshooting

OPI StorMax: The StorMax monitoring system provides you with accurate digital data about your grain so you can proactively manage aeration fans and prevent spoilage. StorMax is ideal for grain storage managers looking for a low-cost solution. The expandable StorMax system lets you easily upgrade from handheld monitoring to fully automated monitoring system as well. Simply plug in the StorMax monitor to access grain temperature and moisture readings. The StorMax monitor enables you to store all readings, which allows you to analyze long-term trends. The StorMax system lets you proactively manage grain condition by providing you with the grain information you need to determine when and how long to run fans to cool and dry your grain.

Contact Andy Waters, or any Linco Precision representative for more information or for a quote for your grain management setup.

Yetter Summer Programs

From now until August 31st, 2019 Yetter has some programs that include 5% off all Yetter items, the most popular being Poly Twister Closing Wheels, and Row Cleaners and will also be offering \$100 off of Yetter Stalk Devastators. There is also free shipping with all 3 of the products highlighted.

Features of Yetter 5000 Series Stalk Devastators

- Prevents damage to tires, tracks, wires, and hydraulic hoses on combines, trucks, tractors, and implements
- Knocks over and crushes stalks for faster decomposition and microbial breakdown of residue
- Preserves residue cover, reducing soil erosion and keeping stalks in place in windy conditions
- Quick and easy to install with mounting kits for most corn head models
- Features spring-loaded, adjustable down pressure
- Solid steel construction ensures reliability and durability
- Will not interfere with most head cart trailers
- Rollers can be locked up for transport of head or when not in use

Stalk Devastators are \$100 off per row and the prices are generally as follows (depends on corn head make and model in some instances)

6 row head- \$4,326 no discount, so this would make it \$3,726 with \$100 off per row

8 row head- \$5,768 no discount, so this would make it \$4,968 with \$100 off per row

12 row head- \$8,652 no discount, so this would make it \$7,452 with \$100 off per row
